TI – 84 + Graphing calculator

Although this is an expensive calculator, with care, this calculator should last through college.

Graphing calculators are not used in the classroom to help students find the answer to a problem. Instead, they are used to help students learn concepts by visualization.

There are many different brands of graphing calculators. I am recommending that your student get a TI – 84 Plus calculator. It is the education industry standard. Every math teacher in your child’s future will be able to help your child use the TI – 84 Plus. For example, if a student was asked to run a regression on a set of points, all math teachers would be able to help your student use a TI-84. However, very few teachers would be able to help with any other brand of calculator.

Once you buy this calculator and you are sure that you have the right one, please open the battery cover and etch your name into the calculator. This way, if the calculator is lost, it may be returned to you.

If you have any questions or concerns, please contact me.
